

Refraction Notice

You will most likely require a "refraction" today. This is a routine test performed annually for most patients. It is used for diagnostic purposes, and to provide you with a current eyeglass prescription. The cost is \$51.00, and usually is not covered by insurances. Your technician and/or doctor will determine, based on specific criteria, when the refraction may be appropriate for you. If you have any questions, please feel free to ask our staff.
